AMENDMENTS TO THE CLAIMS

1.   Canceled.

2.   Canceled.

3.   Canceled.

4.   (Currently Amended) ~~The method of claim 3, further comprising~~ A method for updating data in a database associated with a wireless network pursuant to a digital retune of the wireless network, the method comprising:

        receiving as user input at least two files, a first file containing CTM/TPPTM data and a second file containing DCCH information;

        generating one or more scripts to update call-specific data in one or more forms in the database using the first and second files, wherein the forms are selected from the group consisting of ceqsu2, dcch, ctm, resel and fci;

        executing the scripts to locate occurrences of cell/face data in a MAHO list for the resel and fci forms;

        changing one or more digital control channel numbers in ~~said~~ the resel and ~~said~~ the fci forms respectively to new digital control channel numbers; [[.]]

        inputting the scripts to an apxrcv script; and

        executing the apxrcv script to update the call-specific data in the ~~Lucent ECP~~ forms.

5.   (Currently amended) ~~The method of claim 1, further comprising~~ A method for updating data in a database associated with a wireless network pursuant to a digital retune of the wireless network, the method comprising:

        receiving as user input at least two files, a first file containing CTM/TPPTM data and a second file containing DCCH information;

generating one or more scripts to update call-specific data in one or more forms in the database using the first and second files;

inputting the scripts to an apxrcv script;

executing the apxrcv script to update the call-specific data in theforms; and

updating one or more of a resel form and an fci form prior to updating information in any other of ~~said~~ the forms.

6. Canceled.

7. Canceled.

8. Canceled.

9. (Currently Amended~~) The method of claim 1, further comprising~~ A method for updating data in a database associated with a wireless network pursuant to a digital retune of the wireless network, the method comprising:

receiving as user input at least two files, a first file containing CTM/TPPTM data and a second file containing DCCH information;

generating one or more scripts to update call-specific data in one or more forms in the database using the first and second files;

inputting the scripts to an apxrcv script;

executing the apxrcv script to update the call-specific data in the forms; and

identifying whether ~~said~~ the files contain control characters.

10. Canceled.

11. Canceled.

12. Canceled.

3

13. Canceled.

14. (Currently Amended) ~~The medium of claim 13, further comprising~~ A computer-readable medium containing instructions for updating data in a database associated with a wireless network pursuant to a digital retune of the wireless network, the medium comprising:

instructions for receiving as user input at least two files, a first file containing CTM/TPPTM data and a second file containing DCCH information;

instructions for generating one or more scripts to update call-specific data in one or more forms in the database using the first and second files, wherein the forms are selected from the group consisting of ceqsu2, dech, ctm, resel and fci;

instructions for executing the scripts to locate occurrences of cell/face data in a MAHO list for the resel and fci forms;

instructions for inputting the scripts to an apxrcv script;

instructions for executing the apxrcv script to update the call-specific data in the forms; and

instructions for changing one or more digital control channel numbers in ~~said~~ the resel and ~~said~~ the fci forms respectively to new digital control channel numbers.

15. (Currently Amended) ~~The medium of claim 11, further comprising~~ A computer-readable medium containing instructions for updating data in a database associated with a wireless network pursuant to a digital retune of the wireless network, the medium comprising:

instructions for receiving as user input at least two files, a first file containing CTM/TPPTM data and a second file containing DCCH information;

instructions for generating one or more scripts to update call-specific data in one or more forms in the database using the first and second files;

instructions for inputting the scripts to an apxrcv script;

instructions for executing the apxrcv script to update the call-specific data in the forms; and

instructions for updating one or more of a resel form and an fci form prior to updating information in any other of ~~said~~ the forms.

4

16.   Canceled.

17.   Canceled.

18.   Canceled.

19.   (Currently Amended) ~~The medium of claim 11, further comprising~~ A computer-readable medium containing instructions for updating data in a database associated with a wireless network pursuant to a digital retune of the wireless network, the medium comprising:

    instructions for receiving as user input at least two files, a first file containing CTM/TPPTM data and a second file containing DCCH information;

    instructions for generating one or more scripts to update call-specific data in one or more forms in the database using the first and second files;

    instructions for inputting the scripts to an apxrcv script;

    instructions for executing the apxrcv script to update the call-specific data in the forms; and

    instructions for identifying whether ~~said~~ the first and second files contain control characters.

20.   Canceled.

21.   Canceled.
